

ABSTRACT

A portable wind powered light that can be attached to a moving object or the like to allow generated wind to illuminate a light source. The light includes a generator disposed interiorly of a protective cylindrical housing. The housing has a first end, a second end, and a cylindrical side wall therebetween. A propeller is coupled with the first end of the cylindrical housing. The propeller is operably coupled with the generator. A support arm extends outwardly from the second end of the cylindrical housing. A light source is coupled with the support arm. The light source is in communication with the generator.
